WATER RESOURCES RESEARCH

VOLUME 10 1974

PUBLISHED BY AMERICAN GEOPHYSICAL UNION

WATER RESOURCES RESEARCH

a journal integrating the physical and social sciences of water

Editors

George H. Davis
Charles W. Howe

Associate Editors

J. Amorocho, University of California, Davis
Gardner M. Brown, University of Washington, Seattle
Dominic M. Di Toro, Manhattan College
Robert H. Haveman, University of Wisconsin, Madison
Jon C. Liebman, University of Illinois, Urbana-Champaign
R. A. Freeze, University of British Columbia, Vancouver
G. Earl Harbeck, Jr., U.S. Geological Survey
Robert N. Farvolden, University of Waterloo, Ontario
H. L. Ferguson, Atmospheric Environment Service, Ontario
David C. Major, MIT, Cambridge
Nicholas C. Matalas, U.S. Geological Survey
James R. Meiman, Colorado State University
Donald R. Nielsen, University of California, Davis
Robert M. Ragan, University of Maryland
Clifford S. Russell, Resources for the Future
Stanley A. Schumm, Colorado State University
William E. Sopper, Pennsylvania State University
Keith D. Stolzenbach, Tennessee Valley Authority
George K. Young, Meta Systems, Inc.

Editorial Staff

Judy C. Holoviak, *Head, Editorial Services Division*
Jane Bruce, *Chief Copy Editor*
Jenifer M. Bradford, *Administrative Assistant*

Copy Editors: Ilka Shore Cooper, Betsy W. Ferry, Paulette Garthoff, Sheirazada Hann, Lovera M. Hass, Andie M. Heid, Elaine Kennell, Sylvia Miller, Judy R. Proffitt, Susan A. Poling, Margaret Quadrino, A. Kathie Rankin, Reine Rosenbaum, Carol Taylor, Joan A. Teitelbaum

Editors' Assistants: Dorothy Ireland (Reston Office); Frances Macy (Boulder Office)

Officers of the Union

Philip H. Abelson, *President*
Frank Press, *President-Elect*
Charles A. Whitten, *General Secretary*
Homer Newell, *Foreign Secretary*
A. F. Spilhaus, Jr., *Executive Director*

Officers of the Section of Hydrology

Henry W. Anderson, *President*
Ven Te Chow, *President-Elect*
A. Ivan Johnson, *Secretary*

Published bimonthly by the American Geophysical Union from 1707 L Street, N.W., Washington, D. C. 20036. Second-class postage paid at Washington, D. C., and additional offices.

The development of water resources is linked to many sciences. The Section of Hydrology of the American Geophysical Union has long considered its role as a forum for research in the sciences of water to transcend 'hydrology' and to include other natural sciences such as fluid mechanics, geochemistry, and geomorphology. This readiness to serve is now enlarged to include those social sciences that provide sound principles to guide public decisions about the development of water. Some of the same kinds of analyses may apply to resources other than water, but the field of water resources has led the way toward integrating the social and the natural sciences in resource development. The role of this journal as a forum for research is believed by the editors to be in the modern trend and in the public interest.

The Editors of *Water Resources Research* invite original scientific contributions in the sciences of water. Information for contributors can be obtained from AGU. Please submit an original and two copies and three sets of illustrations to

Hydrology, physical, chemical, and biologic sciences

University of Colorado
Boulder, Colorado 80302

Publication Charges: Authors' institutions are requested to pay a publication charge of $70/page, which, if honored, entitles them to 100 reprints. This charge helps support rapid publication of WRR and prevents the need for stringently restricting the number of pages in a volume. Very low subscription rates result in a high circulation of over 4500 issues, approximately one half going to libraries, where even wider distribution is afforded.

Foldouts and color figures may be published if they are necessary to the proper presentation of material. The additional cost for these services must be borne by the author. Check with the AGU editorial office for current prices.

Microform Publication: Authors are encouraged to submit papers that are as concise as possible. Doing so will not only reduce their publication charges but will also reduce the time the reader spends recovering information and thus makes the journal a more efficient medium. To provide for complete reporting of work, parts of any paper may be published in microfiche. Such material is included in the microform editions and is available to individuals on order. Summaries of articles with key figures may be submitted for printing in the journal, the detailed article being published in microfiche. Microfiche publication is also suitable for supporting material, such as tables of data, lengthy mathematical derivations, and extended background discussion. Photographs with a wide tonal range are not suitable. Authors may submit material such as the above and request that it be considered for micropublication, or the editors may request that papers be revised to take advantage of this format. The charge is $15 per 58 pages of manuscript copy. All material published in microfiche is also included in the microfilm edition of the journal, which is archived by libraries and thus is readily available.

Subscriptions: Members of the American Geophysical Union may subscribe to Water Resources Research for their personal use at the regular rate of $10 annually. Subscriptions to the entire journal are available to libraries and other institutions at $40 for calendar year 1974. Single issues are $10 each.

Copyright: Permission is granted to quote from this journal provided that the source is properly cited. Figures and tables may be reproduced in articles for publication in scientific journals provided that the source is properly cited, the authors' consent has been obtained, and the American Geophysical Union editorial office is notified. The making of occasional copies of articles by a scientist for his own use is considered 'fair use.' The reproduction of multiple copies and the use of articles or extracts, including figures and tables, for commercial purposes require the consent of the author and specific permission from AGU.
